

In today's CC, you need to **host** 2 your FE project/assignment as one application to Heroku.

The first project is the "**TicTacToe**" game which you made for the week-18 day-5 as an assignment.

The second project is the "**Hoverboard**" which you made for the week-21 day-5.

These are FE projects which need to be served from a server, you don't need to manage sessions or anything of the same.

However, you have to serve your content in the following manner:

GET /

This route should show two links, one for **Hoverboard** and one for **TicTacToe**

GET /hoverboard

This route should show the **Hoverboard** project.

GET /tictactoe

This route should show the **TicTacToe** project.

Do ask your doubts in **#ask_instructor** channel.
