

In your Color Tiles project, it is time to add more CSS effects.

Things to be implemented:

1. A gradient background for the entire page.
2. The mouse pointer should change to cursor (hand symbol) on hover of the color tiles.
3. On hover of the color tiles, the tile should get a shadow and also increase in its size.
4. The change (shadow & scaling) must be animated, i.e. the change should NOT be immediate.

As an example, a GIF is posted in the #announcement Slack channel.

Note:

- No inline/embedded styles to be used.
- You can add additional CSS hover effects as you may seem fit. However, shadow and scale are mandatory.
