

For this assignment, you need to create a random color Hoverboard. The project is simple yet challenging. It will test your HTML, CSS and JS skill all at once.

The number of squares at minimum should 300. You also need to achieve similar animations as per the project.

Note:

- The design above is just for reference and you can design your own UI, however it should be similar to the idea of the project.
- Do focus on readability, and approach of your source code.
