In today's CC, you will be contributing to the [yelpcamp repository](#).

Your task is to create a landing page for the root route **"/"** which may (but not necessarily) look similar to [this homepage](#).

The minimum requirements that much be followed are:

- The landing page must be responsive.
- The landing page should atleast fill the entire browser window for all generally available screen resolutions.
- The landing page must have a text "Welcome to YelpCamp!" and a button with text "View Campgrounds".

Note:

1. You will be marked on your design's approach, responsiveness, code readability, best practices, and properly creating a PR.
2. You can add upon the design and add more content to the landing page if you like.
3. You should use handlebars instead of normal html. Do the needful to link your custom CSS, JS (if any) along with any images you might have.

GitHub Contribution Steps:

If you are unaware of how to create PR and contribute, [click here](#).

The overall steps in brief are:

1. Fork the repo which you want to contribute.
2. Clone the forked repo from your account.
3. Create a new branch in your git and make whatever changes the project needs
4. Commit the new changes and push to GitHub.
5. Create a PR with base branch being the of original repo and new changes will be the branch of you forked repo.

Let me know if you have any doubts in **#ask_instructor** channel.
