In today's CC, you need to get user's location using the Geolocation API, and generate a Google Map URL (see below) to which user gets redirected to, when clicking the button "View on Google Map".

(See #announcement channel in slack for the GIF)

Action: User clicks on "View on Google Map" which opens up a map

URL format:

https://www.google.com/maps/search/?api=1&query=latitude_value,longitude_value

In the above URL, **latitude_value** & **longitude_value** are the value obtained from the Geolocation API.

You need to use the above URL as a link in your page.

Note:

- You have the freedom to style the page in anyway you like.
- No embedded JavaScript. Your JavaScript code should be written in a .js file and should be linked accordingly.
